Utility Service.

Work-Driven Design®

BECAUSE YOUR CUSTOMERS COUNT ON YOU.

Your job is to keep things running, whether it's power, gas, cable, phone, or the community you serve. You need to get to the site and have the right tools on hand to be ready for anything. That's where Utilimaster comes in with custom utility service vehicles built around their demands and your needs. Think of us as the ultimate utility vehicle for your service.

When one of your service vehicles shows up, it means the work will get done. Customers feel confident that the people inside will install, repair, or maintain their service with speed, reliability, and quality. Your reputation has been our driving force at Utilimaster for over four decades. You should feel that same sense of confidence every time you get behind the wheel and head out on a call.

2 Assess

Once we understand your needs, we hit the road—literally. Our engineers get out in the field with your drivers and conduct a productivity audit. We observe delivery processes, route navigation, driver safety, and operational details. At this stage, we often discover seemingly minor opportunities that can translate into major business results.

1 Listen

Before we spec anything, we take the time to understand your business. It's critical that we get to know the bigger context of your fleet operations. Hearing more about your organizational goals, business needs, and challenges helps us think strategically about how to improve your fleet productivity.

3 Design

With a broad business context and a detailed driver experience, we design solutions that are specific to your fleet objectives. Designing with knowledge can make the difference that sets you apart from your competition and delivers measurable returns to your bottom line.

WORK-DRIVEN DESIGN KEEPS YOU WORKING.

We use a unique design/build process that's based on real-world data and on-the-road experience. From meeting with the fleet managers to accompanying the end users on service calls, we zero in on a solution for your crew to work faster, safer, and more efficiently.

Our dedicated team of utility service application engineers leads the vision and design of your solution from concept through completion. With that vision and our team of electrical and mechanical engineers, your customized vehicle solution quickly becomes reality.

5

Optimize

Once your vehicles are delivered, we enter into a new phase: that of a continued partnership. As your vehicles hit the road, we offer services that increase your fleet capacity and savings. And we're always on the lookout for new opportunities that might further your goals. Think of us as an extension of your team.

4

Build

Our production is guided by the latest in continuous improvement methods. As we build your fleet, we are constantly auditing for smoother logistics, more efficient processes, and additional cost savings. This process ensures our deliveries are always on time, on budget, and beyond expectations.

INNOVATIONS WHERE SPEED AND EFFICIENCY COUNT.

To keep your service ahead of the curve, we're constantly looking for new and better ways to custom-build our vehicles around your utility. The more we understand your customers' needs, the more efficient and productive your people can be out on the road.

Auxiliary power:

To be prepared for the job, your power source is your lifeline. In order to support these needs, we offer industry-leading solutions, including generators, hybrid APU, and lithium ion systems.

Exterior storage:

Having ample storage space is vital to the organization and access of your tools. To accommodate this, we customize the best package to suit your fleet's needs.

Interior storage:

Understanding your fleet allows us to bring you industry-leading offerings for your interior upfits. From basic shelving to a customized storage package, our purpose-designed interiors will be the right solution for your fleet.

Work lighting:

Interior and exterior lighting are important to create a safe work environment for your crew. Using industry-leading technology, our enlightened product offerings show you the clear way to success.

Warning lighting:

Arriving on scene at night or warning nearby traffic is always a possibility in this industry. To provide the safest environment for your team, we have a variety of product offerings that can shed light on any moment.

Specialty equipment:

We understand that each vehicle in your fleet has a specific purpose, and along with that comes specialized equipment. To accommodate that equipment, we work with many third-party vendors to provide systems such as PTO generators/compressors, lift assist, or hazardous waste management.

NO JOB TOO SMALL, MEDIUM, OR LARGE.

The demands on your service fleet change from day to day. Customer to customer. You need vehicles that fit your needs as well as any job that comes up. Flexibility is the key to your service success. Utilimaster has the correct rig to help you get the job done right.

Truck Bodies

Built on a solid cab chassis, Utilimaster's truck bodies are the industry standard for heavy-duty commercial service and delivery. Engineered and made tough with FRP, aluminum, and composite materials like DuraPlate, they're all built to deliver optimal performance and maximum versatility.

Walk-in Van

For the ultimate versatility, our walk-in vans have a highly modular stand-up cargo area and multiple door configurations. Lightweight aluminum construction provides a durable, rust-free body for lighter overall weight and increased payload capacity. Low step-in cab and rear doors make entry and exit easy and accessible.

Cargo Van Upfit

Utilimaster cargo vans are the perfect solution for quick service, installation, and maintenance fleets that require multiple stops per day, and fewer tools and/or components to get the job done. They're smaller and nimbler to easily navigate through narrow city streets and residential areas.

As easy as one call, one PO, one turnkey resource.

Developing specs, customizing, building, upfitting, and delivering utility fleets are done from start to finish through Utilimaster. There's no need to wrestle with different vendors for vehicles, components, and upfits. You work with one partner, one team, and one PO to get everything you need done for your utility service fleet.

Aftermarket Parts

We have thousands of quality aftermarket parts to replace what's broken or to upgrade your fleets with the latest and smartest technology, including everything from back-up cameras to keyless entry to GPS and beyond. Plus, we have the expertise to come to you and install with confidence.

Field Service

Our field service teams can assess your fleet and recommend new parts and technology to modernize and optimize your vehicles. Then, they'll make sure installation gets done quickly and efficiently with zero downtime, so you can get on the road and focus on your business.

THE VEHICLES TO KEEP UTILITIES RUNNING.

The road to optimizing your utility service fleet begins with the right partner. The professionals at Utilimaster take time to understand your business from the C-suite to the streets. Allow us to learn more about your objectives and obstacles, and together, we'll do our best to get you on the road to better service.
